DETAILED ACTION

Claims 1-19 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-18, drawn to a triazine compound, classified in class 544, subclasses 197, 208, 219.
- II. Claims 1-2, 4-12, 15-16 and 19 drawn to urea compound, classified in class 564, subclass 52.

The inventions are distinct, each from the other because of the following reasons:

The inventions are distinct, each from the other because of the following reasons:

As per MPEP § 803, there are two criteria for a proper requirement for restriction between patentably distinct inventions:

- (A) The inventions must be independent or distinct as claimed and
- (B) There must be a serious burden on the examiner if restriction is required.

Invention I and II are independent and distinct from each other because they are directed to structurally dissimilar compounds that lack common core namely triazine and urea core. Consequently, the groups require separate prior art searches. For example searching triazine core in CAS ONLINE will not lead to urea core compounds sand vie versa. They can be made and used independently. Art which may render obvious or anticipate one of the groups would not necessarily do the same for the other group. Some references cited in the Information Disclosure Statement may anticipate one core but may not do the same for other core groups embraced. Each can support a patent,

Art Unit: 1624

as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

In addition, it is necessary to classify and search both the cores. Such a search of both cores for prior art would be a serious search burden given the limited time available for each application.

In view of the distinct nature of each of the inventions, the restriction is set forth in writing.

This application contains claims directed to patentably distinct species of the claimed invention. See claims 12-17.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-11 and 18-19 are generic.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 1624

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
